Dr. Arne Nordoy
Somewhere near the artic circle...
Tromso, Norway

Dear Dr. Nordoy,

The Clinical Research Center isn't the same without you! We all miss your smiling face and philosophical discussions. For the last three days we've been boiling up with near 100 degree (F) summer weather, aren't you sad to miss such nice weather?

Enclosed are the fatty acid composition of the fat tolerance tests and that of the research diets as well as some other summary information that you had requested. I apologize that I did not get these typed because I wanted to send them ~~out~~ to you as soon as possible.

In reviewing some of the data for the fat tolerance tests at Dr. Connor's request, I found that some of the plasma lipid and chylomicron triglyceride data had been revised after you had compiled your summary tables of this data. So I am enclosing some of this data, ~~as well~~.

Also enclosed are the creatinine analysis of the urines sent to Dr. Fitzgerald. If you have an earlier summary of the creatinine levels, please note that two of the samples were repeated and are somewhat different. However the revised value for Glenn Hutchinson's urine sample on 11-29-87 is still less than 50% of the creatinine level of his other samples.

Our preproposals for funding of the Fat tolerance tests and the fish oil diet study were accepted, so we will be sending in funding proposals by September 15, 1988. I'll keep you informed of the result.

Let me know if you need anything further on these studies.

Sincerely yours,

Lauren Hatcher
Lauren Hatcher, M.S., R.D.
